Art Unit: 1731

1. Applicant's election with traverse of Group I in Paper No. 7 is acknowledged. The traversal is on the ground(s) that (1) the products of Group II cannot be made by a different process as alleged by the examiner and pages 3-4 of the specification indicate that CVI is not a suitable method for making such a product (2) the product claims would need to be searched in class 264 and thus no separate search is necessary. This is not found persuasive because the above referenced portion of the specification indicates that corrosion resistant metals could be processed by this method. The product claims of the instant application are not limited to a particular metal. Further, although the search areas for each group of invention may overlap, each group would include unique search areas and search considerations.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 22-25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Applicant timely traversed the restriction (election) requirement in Paper No. 7.

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Art Unit: 1731

4. The abstract of the disclosure is objected to because it contains language which can be implied (i.e. "There are also disclosed..."). Correction is required. See MPEP § 608.01(b).

5. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The preamble of claims 1,9,14 and 20 recite the term "ceramic composite". The composite material produced however is a ceramic metal composite.

Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. See 37 CFR 1.75(i). See MPEP 608.01(m).

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kaya et al. (5,459,114) and Schwark (5,464,918) teach the incorporation of metallic components into ceramics derived from polymeric precursors.

7. Claims 1,9,14 and 20 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

8. Claims 2-8,10-13,15-19 and 21 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Art Unit: 1731

9. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record does not teach or suggest does not teach the production of a ceramic metal composite forming a preceramic composite from a polymeric ceramic precursor and at least one metallic element and thereafter pyrolyzing the composite with high frequency microwave radiation or a beam of microwave radiation of at least about 20 GHz as substantially set forth in the claims.
